TECHNICAL DATA SHEET

Product: MASCOBOND HI-MOD GEL
Revision Date: 3/19/2015

DESCRIPTION
MASCOBOND HI-MOD GEL is a 100% solids, two component moisture insensitive, high modulus gel, structural epoxy adhesive system.

USES
- Seals cracks and around injection ports prior to pressure injection grouting.
- Grouting bolts, dowels and pins in vertical, horizontal and overhead holes.
- Interior, vertical and overhead repair of concrete as an epoxy mortar binder.
- Structural bonding concrete, masonry, steel, wood with maximum glue line 1/8”.

FEATURES AND BENEFITS
- Easy 1 to 1 mixing ratio.
- Insensitive to moisture before and after cure.
- Excellent for bonding non-mating structural materials.
- Combined with MASCOBOND AGGREGATE makes a non-sag epoxy mortar for vertical & overhead repair.

SURFACE PREPARATION
Surface must be clean and sound. It may be dry or damp, but free of standing water. Remove dust, laitance, grease, curing compounds, impregnations, waxes, foreign particles, disintegrated materials. Preparation work: Concrete - Sandblast or use other approved mechanical methods. Steel - Sandblast to white-metal finish.

MIXING INSTRUCTIONS
Material must be conditioned at 70°F for at least 24 hours prior to application.

Binder: Pre-mix each component separately. Place in a clean container, 1 part by volume of Component A (Resin) and then add 1 part of Component B (Hardener). Container should have a flat wall and flat bottom. MIX THOROUGHLY for 3 minutes with a paddle on a slow speed drill (400 or 600 rpm). Scrape the sides and bottom of bucket thoroughly while mixing. MASCOBOND HI-MOD GEL is an epoxy gel and does not readily flow from the sidewalls of the mixing container to be mixed. Improper mixing will create soft spots in the finished product.

Mortar: Mix Components A and B as above, then slowly add MASCOBOND AGGREGATE. Amount added may be varied depending on desired consistency. Recommended maximum amount is 1 volume of aggregate to 1 volume of mixed epoxy gel.

APPLICATION TECHNIQUES

Structural adhesive: Apply neat MASCOBOND HI-MOD GEL to mating and non-mating prepared substrates. Work into the substrate for positive adhesion. Secure the bonded unit firmly into place until the adhesive has cured. Glue line should not exceed 1/8 in.

Seal cracks for injection grouting: Place the neat material over the cracks to be pressure injected and around each entry port. Allow sufficient time to set before pressure injecting. Anchor bolts, dowels and pins: Use neat. For efficient transfer of stress, the hole should be no greater in diameter than 1/4 in. larger than the bar, pin, or rod to be embedded. Depth of embedment is typically 10 to 15 times bar diameters. Due to the non-sag consistency, it is important that a long nozzle be used to force the epoxy into the bottom of the bolt hole to avoid air entrapment.

Mortar: Apply with spatula, trowel or caulking gun. Add aggregate filler to avoid sagging on vertical and overhead surfaces. Do not apply the epoxy gel mortar at thickness greater than 1 inch. Apply subsequent lifts within 12 hours, or mechanical abrasion of surface required.

Note: For bonding fresh plastic portland cement or concrete to hardened concrete, use MASCOBOND HI-MOD.

COVERAGE

Adhesive: 1 gallon of MASCOBOND HI-MOD GEL covers approximately 12 square feet at 1/8” on smooth surfaces.

Grout: yields approximately 231 cubic inches per gallon.

Mortar: 1 gallon of MASCOBOND HI-MOD GEL when mixed with 1 gallon of MASCOBOND AGGREGATE will yield approximately
Hazard Identification

Component “A”: Vapors from product may cause irritation to the nose, throat, and respiratory tract. Coughing and chest pains may result. High vapor concentrations may produce CNS depression. Product may cause severe eye irritation. Skin contact with product may cause irritation, redness, and discomfort which is transient. Product may be slightly toxic if ingested. Repeated exposure may cause skin sensitization, skin irritation, and dermatitis. Preexisting eye, skin, and respiratory disorders may be aggravated by exposure of this product.

Component “B”: Vapors/mist may be corrosive to upper respiratory tract. Repeated or prolonged exposure can result in lung damage. Lung damage may be evidenced by shortness of breath and may be accompanied by chronic cough. Product may cause irritation to the eyes. Corrosive to eyes and may cause severe damage including blindness. Corrosive to the skin; may cause skin sensitization. Ingestion may cause permanent damage to the mouth, throat, and stomach. Repeated exposure may cause skin sensitization or sensitization to the respiratory tract and development of an asthmatic reaction to future exposure. Preexisting eye, skin, and respiratory disorders may be aggravated by exposure of this product.

First Aid

Inhalation: Leave are to breathe fresh air. Avoid further exposure. If symptoms persist, get medical attention.

Eyes: Flush with water for at least 15 minutes. Get medical attention immediately.

Skin: Wash with water. If irritation, rash or other disorders develop, get medical attention immediately.

Ingestion: Do not induce vomiting unless advised by a physician. Call nearest Poison Control Center or Physician immediately.

Cleanup Instructions

Ventilate area. Confine spill. Collect with absorbent material, flush area with water. Dispose of in accordance with current applicable local, state and federal regulations. Uncured material can be removed with an approved solvent. Cured material can only be removed mechanically.
