

REBAR BENDER

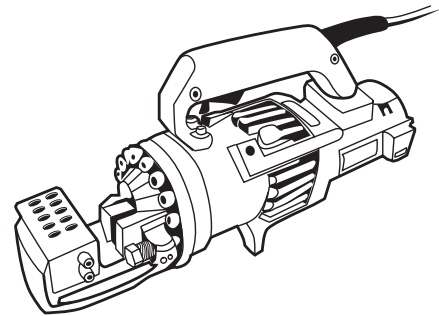

This rebar bender is a portable machine designed for accurate, precise bending. Each bend is automatically made to the exact angle desired. Bends a full range of bar sizes up to 7/8" diameter (#7 rebar). A foot switch is included for hands-free bending. This bender features single phase, 115 volt universal motor, is compact and lightweight for easy portability and extremely easy to operate. Single control knob selects precise bending angle from 0° to 180°. Electro magnetic clutch is close-coupled to the motor; motor runs only during bending operation for lower noise level and energy efficiency. Sealed clutch-gear case prevents contamination and requires no inspection or maintenance. Emergency stop button and flush mounted start button for safety. Tool kit included. Other sizes available.
